

Palm Export from Paragon™

The Paragon palm export program allows you to easily pull listings of all classes from Paragon to your palm.

In order to take advantage of this export, you must have a handheld running the Palm OS version 3 or above. In addition, you must have the desktop software for your Palm loaded on your PC including HotSync Manager.

To set up your PC and Palm for exporting from Paragon, please follow these steps:

1. **Install the Database Link Application software on your PC.** To download this free software, go to <http://www.fnismls.com/support/updates/dblnkapp/dblnkapp.htm>. Scroll down until you see an InstallShield Wizard icon on the left side of the page. Click on this InstallShield Wizard and follow the on-screen directions to install the Database Link Application.
2. **Install the freeware List on your Palm.** To download this free software, go to <http://www.magma.ca/~roo/list/list.html>. Click on the download button located on the top left of the screen. Click on the Download List Now! Version 1.1.0 link at the top of the screen. Choose to save the file to your PC. You will be prompted to save the List.zip file to a folder that will be checked during your next HotSync (ie Add-On). HotSync your palm. An icon labeled List will now be present on your screen.
Note: If the List application does not appear on your Palm, use the Install Tool within your Palm Desktop Software and manually move the List.zip file. If you need help with this, call the MLS or check your palm documentation/website for information on installing third party applications.

To export listings from Paragon to your Palm, please follow these steps:

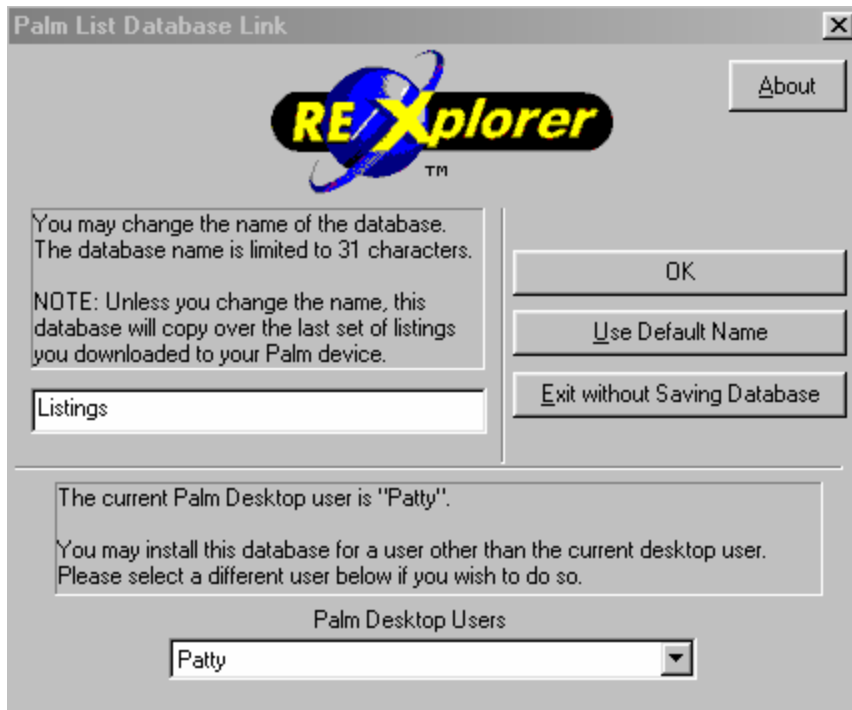

1. Do a search in Paragon for the listings you would like to export to your palm. From the Views/Reports button, select Export and then Palm Export.
2. On the Paragon Export screen, you will be given an option to export the listings from the spreadsheet or to export all the listings from your search. If you eliminated listings from the full search results list, choose the Spreadsheet Results option. If you want all the listings from your search to be included, choose the All Listings option. ***Caution: If you did not load all your matches on your spreadsheet, but want to include all of them, make sure you select to Export All, which is not the default.*** Once you make your selection, click on the Export button.

<input type="radio"/> Export All Listings From Search Criteria (1267)

Export

3. A Palm List Database Link window will pop up. Here you can name your database. There is a limit of 12 databases that can be loaded within the List application. When updating an existing database on your Palm, simply name it the same and the file on your Palm will be overwritten. After naming your database, click on OK.

3. A pop up window will display telling you that your file has been loaded and is ready to be HotSynced. The next time you HotSync your Palm, your listing file will be exported.

Using the List Program on your Palm

The List program will display listings in ascending price order. Both the price and the street address are included on the main screen. You can use the Find button to find a property by street name or any other data that is included in the listing as saved within the file. You can also scroll through the listings and select the listing you would like more information on.
