Using PC Access to Connect via an Internet Connection

1. Open PC Access but do NOT connect to Maestro™.

2. From the Main Menu of PC Access for Windows, click on the Setup Menu button. Click on the Advanced Setup button in the Setup Assistant Window.

3. Click on the Phone Book button in the Advanced Setup Window. Click Add.

4. In the Add Phone Book Entry Window, click on the General tab at the top. In the Service Name field, type an entry such as Maestro Internet. Under Emulation, click on Maestro. Under Connection, click on TCP – Telnet.

5. At the top, click on the TCP/IP tab.

6. Click in the Host Name or IP Address field and type 66.84.134.5 In the Host User Name field, type boris The Telnet TCP Port field should be 23. Click OK.

7. On the Phone Book Setup screen, you will now see a new entry called Maestro Internet (or whatever you named it). Click on Close.

8. Click on Internet. Select Use Dial-Up Networking to Access the Internet. You should see the Dial Up Connection field filled out with the name of your dial-up networking connection. (such as My Connection). If you have more than one dial-up networking connection set up in Windows, make sure you select the one for your ISP (Internet Service Provider) connection. Enter the password you use to access the Internet in the Dial Up Password field. Click OK.

   NOTE: Skip this step if you have an ISDN or T1 connection.

To connect to Maestro™ via the Internet:

- Open PC Access and click on the Phone Book button
- Double-click on the Maestro Internet entry. Your computer will now dial up to your ISP, establish an Internet connection and then connect to the Maestro™ system.
